

# Open Prototype Initiative

*Transforming the Way America Builds Homes*

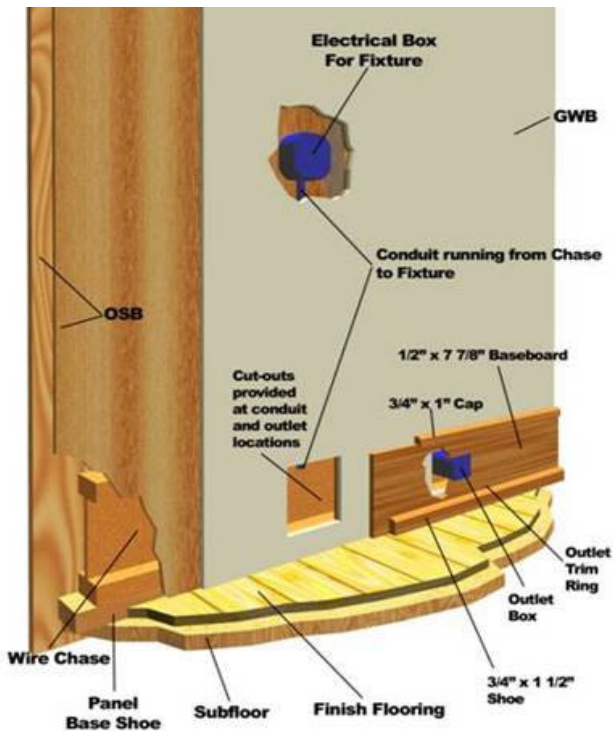

A project of MIT House\_n and Bensonwood Homes

## Open Prototype Walls

The walls of Open Prototype Initiative homes are prefabricated and assembled on-site to ensure quality and speed, and efficiency of construction. The walls are set in place using a crane, with wiring and windows pre-installed.

(Photos on this page are representative of work that will be undertaken in Open\_1 and subsequent prototypes, but are EXAMPLES ONLY. The wall graphic is representative of Open\_1 and subsequent prototypes).

The baseboard chase is designed for easy access to electrical outlets and wiring. No cutting holes in drywall to install new outlets.
